

Oakhurst Golf Club

We started applying Quick-Sol in September on a 2 week interval. The first of October we went from .130 to .150 with the height and put out a heavy application of fertilizer to help build a strong canopy to go in to the winter. I expected to start getting complaints about the speed of the greens. With that being said I have had only good comments about the speed and roll out of the greens. The ball seems to have an extra roll out at the end. That is something I have not noticed in the past with these conditions. I can only contribute it to the Quick-Sol product.
